Ulcerated Gums

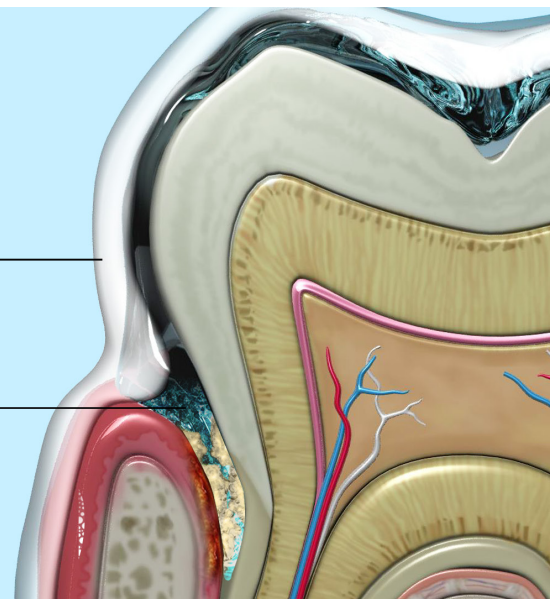

Cannot reach infection / bacteria

Perio Tray[®]

Hydrogen Peroxide Gel

PerioProtect[®]

Visit perioprotect.com to learn more.

Perio Protect® has the reach in the fight against gum disease.

Perio Trays® get medication deeper than toothbrush, rinse, or floss can reach. This effective delivery technique is easy, comfortable, and convenient.

The Perio Tray® is available only with a prescription from your dentist. It has a unique sealing system customized specifically for your mouth to keep medication deep below the gums to fight the infections causing the disease.

Treatment is important. Not only is gum disease the number one cause of tooth loss, but research has also linked oral bacterial infections to type 2 diabetes, cardiovascular diseases, Alzheimer's disease, pregnancy complications, some cancers, and other chronic health conditions.

The bacteria that cause gum disease can also cause persistent bad breath and may affect the appearance of your smile. The medication most commonly used with the Perio Tray® contains a low concentration of hydrogen peroxide that helps fight the infections, freshen breath and gradually whiten teeth.

Perio Tray® delivery gives you more control over your oral health, whether you are treating an early stage of disease or trying to minimize surgical intervention. It helps with long-term bacterial management and gives you a whiter, brighter smile.
